

PUET COMMITTEE

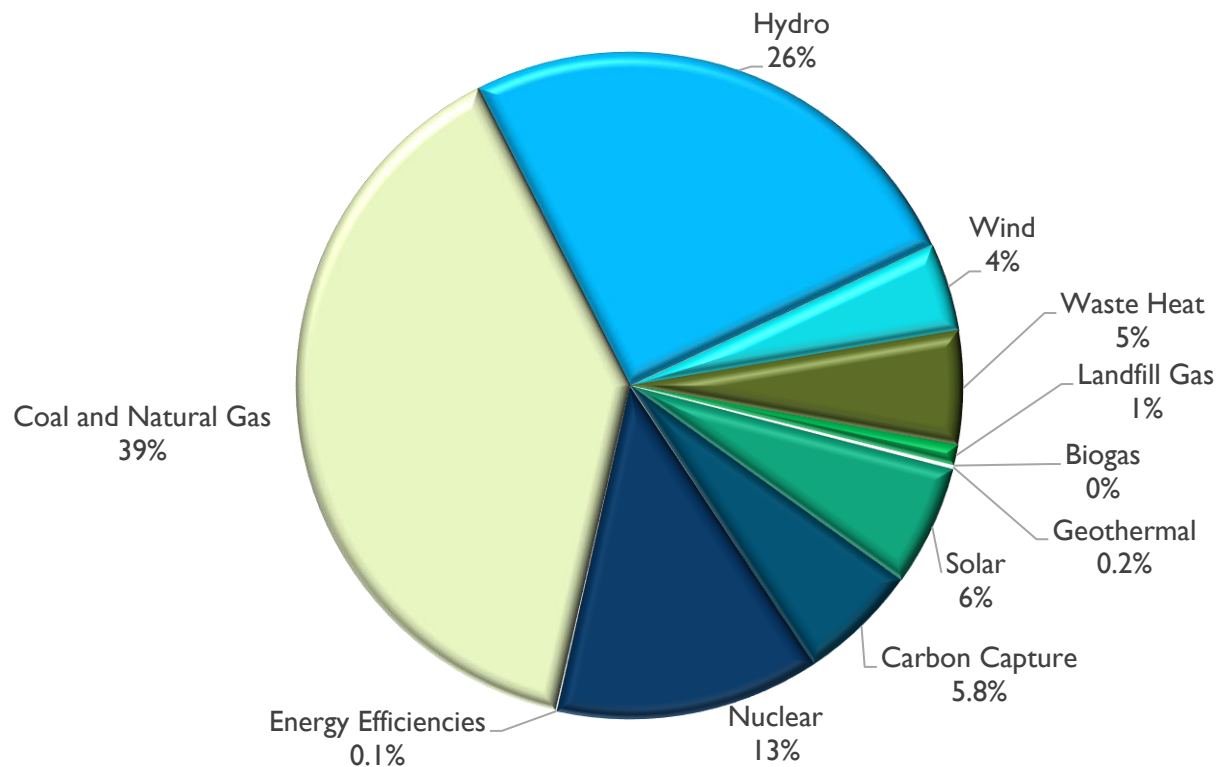

TRANSMISSION AND STATE ENERGY PLAN

MAY 18, 2021

UAMPS RESOURCE PROFILE 2019

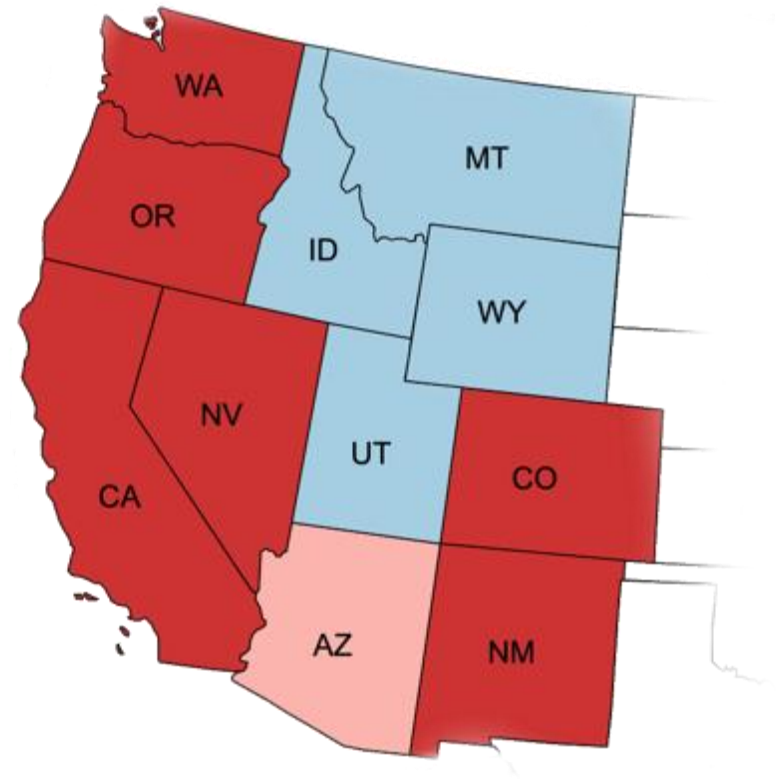

UAMPS RESOURCE PROFILE 2030

ENERGY TRANSITION

- Federal incentives exist to develop renewable energy resources with PTCs and ITCs
- Change in policy regulating the electric utility sector in bordering states
- Federal regulation e.g. Clean Power Plan

THE WESTERN IDENTITY

- Cluster study is a positive move though UAMPS has concerns over additional capacity
- Moving toward a market can increase efficiencies, but how will that come about in the West if not CAISO what would that look like?
- Utah's investment in transmission is warranted as UAMPS member communities grow

NEED FOR PLANNING

- UAMPS supports Utah's state energy policy set in statute and the plans OED pursues to implement it
- Utah should continue this discussion with utility stakeholders
- Utah's investment in transmission is needed, and UAMPS appreciates ongoing involvement in conversations
